Who to call . . . 57

SECTION 1

How the partnership works

You buy Easy Rx Cycle kits in bulk, and we ship them to your warehouse. You stock them and resell them to your customers. Your customer mails the full kit back to us with the prepaid label, and we destroy it and deliver the compliance documents.

1	2	3	4	5
You buy in bulk Ordered in your partner portal.	**We ship to you** Straight to your warehouse.	**You resell** From your stock to your customers.	**They mail back** Prepaid return label to Easy Rx Cycle.	**We destroy** And deliver the Certificate and forms.

WHAT YOU NEVER TOUCH

Waste never passes through you. The DEA transfer is between your customer and Easy Rx Cycle, and we complete the DEA forms. You sell the kit; we carry the compliance.

Pricing

- Prices in this playbook are **MSRP**.

Proof points you can always use

- DEA registered · EPA compliant · HIPAA & DOT compliant
- Serving 1,000+ facilities since 2018, mail-back to all 50 states
- Certificate of Destruction on every mail-back order
- We complete the DEA paperwork on controlled substances
- No contracts and no minimums for the end customer — prepaid return label in every kit

Don't claim

- ✖ That we take pathological waste, formaldehyde, chemicals or radioactive waste — we don't
- ✖ That records are "encrypted", or that end customers can log in to a portal (records are emailed and mailed)
- ✖ Specific savings percentages or turnaround times we haven't confirmed
- ✖ Our DEA registration number — available on request through Easy Rx Cycle

SECTION 2

How you order

You order in bulk in your Easy Rx Cycle partner portal — the same storefront as easyrxcycle.com — and we ship to your warehouse.

Step	In the portal
1. Log in	Open your partner portal and choose **Place an Order**.
2. Pick kits	Choose products and sizes and add bulk quantities to the cart.
3. Ship-to	Your warehouse, saved on your account.
4. Pay	Invoice, ACH or card. Invoice terms follow your account.
5. Track	Order confirmation and shipped emails (with tracking) go to you. Status lives in **Orders & Tracking**.

BUYING IN BULK

- Order by the case or by the pallet.
- Everything ships to your warehouse, ready to resell.
- Every kit includes its prepaid return label, so it's ready to hand off.

WHAT TO STOCK

- Start with the fast movers: Sharps 1 qt and 2 gal, Pharmaceutical 2 gal, Controlled 5 lb, Medication On-Site 0.5 gal.
- Add sizes as your customers' volumes become clear.

Also in the portal

- **Invoices** — every order's invoice and its status.
- **Schedule a Pickup** — for on-site collections: pick the location, list the items, choose a date. We confirm and book it.
- **Company Profile** — your contacts, insurance and banking details.

Bring us in when

- The customer wants a **pickup**, has **multiple sites**, or has more than the largest kit holds (controlled over 100 lbs, charcoal over 50 lbs).
- It's **law-enforcement or evidence** destruction, bulk chemo, or a waste stream you're not sure about.
- You need a custom quote: 501-904-2929 · sales@easyrxcycle.com.

BEFORE YOU SELL A CONTROLLED KIT

Controlled kits are for DEA registrants only. We validate the DEA number when the kit comes back.

SECTION 3

Who to sell to

Start with the customers already in your book. Each type below has a starter bundle — the kits most of them need — and a line to open with.

Starter bundles by customer type

Customer	Starter bundle	Open with
Dental	Sharps 1 qt or 2 gal · Pharmaceutical 2 gal · Controlled 5 lb (sedation practices) · Biohazard 2 gal (oral surgery)	Every operatory has a sharps container. Add one to their next supply order.
Veterinary	Sharps 2 gal · Pharmaceutical 2 gal · Controlled 5 lb · Biohazard 2 gal	Vets hold ketamine, opioids and euthanasia solution. Ask what they do with expired ones.
Independent pharmacy	Controlled 5–10 lb · Pharmaceutical 8 gal · Hazardous (RCRA) 2 gal · Medication Mail-Back · Sharps 1 qt (immunizations)	Expired controls and hazardous drugs pile up behind the counter. One vendor handles both.
LTC, hospice & assisted living	Medication On-Site at each nursing station · Activated Charcoal Take-Back · Controlled 5 lb · Sharps 2 gal	Cheap point-of-use deactivation, plus a documented way to get rid of the full containers.
Physician & urgent care	Sharps 2–9 gal · Biohazard 8 gal · Pharmaceutical 2 gal	No hauler contract or route fees for a low-volume office.
Med spa, aesthetics & GLP-1	Sharps 1 qt or 2 gal · Biohazard 2 gal · Pharmaceutical 2 gal	Injectables mean sharps and expired product. Most have no disposal plan yet.
Oncology & infusion	Trace Chemo 8–18 gal · Hazardous (RCRA) 8 gal · Sharps 9 gal	USP <800> and RCRA in one place, documented.
Compounding pharmacy	Hazardous (RCRA) 2–8 gal · Trace Chemo 2 gal · Pharmaceutical 8 gal · Controlled 5–10 lb	Hazardous prep waste and controlled APIs need separate, documented streams.
Law enforcement & evidence	Quote: on-site load-out and weight-based controlled destruction	Seized and evidence drugs destroyed with DEA Form 41 and a Certificate of Destruction. Bring us in.

SECTION 3

Which kit for which waste

If the customer has…	Sell this kit	Note
Needles, syringes, lancets, blades	Sharps	Red container. Stop at the fill line.
Blood-soaked gauze, PPE, cultures	Biohazard / RMW	Red bag inside the rigid box. No sharps.
Expired regular (non-controlled) drugs	Pharmaceutical	Blue. Not controlled, not hazardous.
Patients' unused medications (take-back)	Medication Disposal — Mail-Back	Not the practice's own controlled stock.
Wants to deactivate meds on site, cheaply	Medication Disposal — On-Site	Nothing ships back; no Certificate.
Expired DEA-scheduled drugs (registrant)	Controlled Substance	Needs their DEA number. We do the DEA forms.
Empty chemo vials, chemo PPE & tubing	Trace Chemo	Yellow. Trace only — no bulk.
P-listed, U-listed or characteristic hazardous drugs	Hazardous (RCRA)	Black. No DEA registration needed.
Full activated-charcoal disposal containers	Activated Charcoal Take-Back	Priced by weight.

Five questions that find the right kits in two minutes

? **What do you throw away today?** Sharps, red-bag, expired meds, controlled drugs, chemo, hazardous drugs?

? **Are you DEA-registered, and do you have expired controlled substances?** → Controlled Substance kit.

? **Do you collect patients' unused medications?** → Medication Disposal Mail-Back.

? **How fast do you fill a container?** → pick a size they'll fill in weeks to months.

? **How many locations?** → several sites, or a pickup, means bring us in for a quote.

THE RULE THAT PREVENTS MOST MISTAKES

One stream per kit. Each kit takes one kind of waste. A customer with sharps and expired meds needs two kits. When in doubt, call 501-904-2929 before they ship.

SECTION 4

Products: quick Q&A

One page per product family: every SKU with MSRP, who buys it, what goes in and what never does, how to size it, how it works, the rules behind it, the paperwork your customer receives, and the questions customers ask most.

PRICING
Prices in this playbook are **MSRP**.

PRODUCT 1 OF 9

Sharps Mail-Back Kit

Needles, syringes, lancets & blades

The simplest compliant way to dispose of needles, syringes, lancets and pen needles — mailed back in an FDA-cleared container.

SKU	Size	MSRP
ERX-SHP-01QT-EA	1 quart	$55
ERX-SHP-125G-EA	1.25 gallon	$95
ERX-SHP-02G-EA	2 gallon	$75
ERX-SHP-09G-EA	9 gallon	$255
ERX-SHP-18G-EA	18 gallon	$285
ERX-SHP-28G-EA	28 gallon	$405

WHAT GOES IN

- Needles, syringes & lancets
- Insulin pens, pen needles & auto-injectors
- IV catheters & butterfly sets
- Scalpel & suture blades
- Blood-contaminated broken glass
- Full or partial sharps containers

NEVER GOES IN

- ✖ Medications or vials → **Pharmaceutical kit**
- ✖ Chemo-contaminated sharps → **Trace Chemo kit**
- ✖ Red-bag soft waste → **Biohazard kit**
- ✖ Milk jugs, coffee cans or loose bags as containers

Who buys it	Physician & dental offices, med spas, veterinary clinics, urgent care, pharmacies giving vaccines, home health, tattoo studios and home injectors.
Which size	1 quart: home user or very low volume. 2–9 gallon: most clinics. 18–28 gallon: high-volume or multi-provider sites. Aim to fill a container in weeks to months, not years — when unsure, start smaller.
How it works	Drop sharps in at the point of use — never recap, bend or break needles. Stop at the fill line (about ¾ full). Close and lock the lid, apply the prepaid return label and hand it to the carrier.
Rules that apply	OSHA Bloodborne Pathogens Standard (29 CFR 1910.1030) · DOT packaging · state medical-waste rules. Sharps mail-back is legal in all 50 states.
Customer receives	**Certificate of Destruction · Medical Waste Manifest**
Destruction method	Autoclave sterilization

CUSTOMERS ASK

Q: Is return shipping included?
Yes — every kit includes its prepaid return label.

Q: Can they mail insulin pens and EpiPens?
Yes, in the same container.

Q: What's the #1 inspection finding?
Overfilled containers. Stop at the fill line.

PRODUCT 2 OF 9

Biohazard / RMW Mail-Back Kit

Red-bag regulated medical waste

Red-bag regulated medical waste — blood-soaked gauze, contaminated PPE, cultures — in a UN-rated mailer with a red liner.

SKU	Size	MSRP
ERX-BIO-02G-EA	2 gallon	$75
ERX-BIO-08G-EA	8 gallon	$240
ERX-BIO-18G-EA	18 gallon	$285
ERX-BIO-28G-EA	28 gallon	$405

WHAT GOES IN

- Blood-soaked gauze & dressings
- Contaminated PPE & gloves
- Cultures, swabs & specimens
- Items soaked or caked with blood or other potentially infectious material

NEVER GOES IN

- ✖ Loose sharps → **Sharps kit**
- ✖ Medications → **Pharmaceutical kit**
- ✖ Trace chemo → **Trace Chemo kit**
- ✖ Pathological waste (tissue) — not accepted

Who buys it	Clinics, urgent care, labs, dental, dialysis, blood & plasma centers, research labs, tattoo studios, funeral homes and crime-scene cleanup.
Which size	Lower-volume generators use mail-back. Very high-volume sites — ask us for a quote.
How it works	Line the box with the red bag, stay below the fill line, keep sharps out, seal, apply the prepaid label and ship. The red bag alone is not a shipping container.
Rules that apply	OSHA Bloodborne Pathogens · DOT · state RMW rules (states are the main authority and vary). The test: would it drip or flake blood if squeezed? A glove with a dot of dried blood is usually regular trash.
Customer receives	**Certificate of Destruction · Medical Waste Manifest**
Destruction method	Autoclave sterilization

CUSTOMERS ASK

Q: What's the difference from sharps?
Sharps need a puncture-resistant container. Biohazard is soft red-bag waste.

Q: Is a contract required?
No — no hauler contract, route fees or minimums.

PRODUCT 3 OF 9

Pharmaceutical Waste Mail-Back Kit

Non-hazardous, non-controlled medications

For expired and unused regular medications — not controlled, not hazardous — destroyed and documented.

SKU	Size	MSRP
ERX-PHW-02G-EA	2 gallon	$100
ERX-PHW-08G-EA	8 gallon	$200
ERX-PHW-18G-EA	18 gallon	$285

WHAT GOES IN

- Expired non-controlled Rx
- OTC drugs & samples
- Unused or returned non-controlled meds
- Vitamins & supplements
- Compounding prep waste
- IV bags with no hazardous drug

NEVER GOES IN

- ✖ Controlled substances → **Controlled Substance kit**
- ✖ RCRA-hazardous drugs (P/U-listed, characteristic) → **RCRA kit**
- ✖ Trace chemo → **Trace Chemo kit**

Who buys it	Physician offices, pharmacies, long-term care, clinics, dental, veterinary, GLP-1 and specialty clinics.
Which size	Pick by volume of expired stock. Not sure whether a drug is hazardous? Treat it as hazardous.
How it works	Segregate, fill, seal and ship with the prepaid label. Drug waste never goes down a drain or toilet.
Rules that apply	EPA (no sewering of drug waste) · state Board of Pharmacy · state environmental rules.
Customer receives	**Certificate of Destruction (containers & weights)**
Destruction method	Regulated incineration

CUSTOMERS ASK

Q: Can controlled substances go in?
No. They use the Controlled Substance kit.

Q: Do you offer pickup?
Pickup is available by quote for larger volumes. Mail-back is the standard service.

PRODUCT 4 OF 9

Medication Disposal Kit — Mail-Back

Patient & consumer medication take-back

A tamper-evident mailer for patient and consumer medications — ideal for take-back programs.

SKU	Size	MSRP
ERX-MED-005G-EA	0.5 gallon	$95
ERX-MED-125G-EA	1.25 gallon	$120
ERX-MED-025G-EA	2.5 gallon	$175
ERX-MED-05G-EA	5 gallon	$300
ERX-MED-15G-EA	15 gallon	$700

WHAT GOES IN

- Patients' unused or expired medications
- Pills, capsules, tablets, patches, creams
- Liquids in original containers
- Patients' controlled substances (commingled)

NEVER GOES IN

- ✖ A practice's own controlled inventory → **Controlled Substance kit**
- ✖ Sharps → **Sharps kit**
- ✖ Inhalers, aerosols, illicit drugs
- ✖ Chemo or hazardous drugs

Who buys it	Pharmacies, LTC & hospice, group homes, clinics and take-back programs collecting patients' unused medications.
Which size	Size to the take-back volume between shipments.
How it works	Drop medications into the tamper-evident inner liner, seal the mailer and send it back. Once sealed, the liner is not opened or inventoried.
Rules that apply	DEA take-back rules (21 CFR 1317, Secure and Responsible Drug Disposal Act) · Board of Pharmacy recordkeeping. Offering patient mail-back packages does not require becoming a DEA authorized collector (an on-site collection kiosk does).
Customer receives	**Certificate of Destruction · return tracking**
Destruction method	Regulated incineration

CUSTOMERS ASK

Q: Mail-back or on-site?
Mail-back ships medications to us for destruction and documentation. On-site deactivates them at the customer's location and nothing ships back.

Q: Can a pharmacy clear its own expired controls with this?
No — a registrant's own controlled inventory uses the Controlled Substance kit.

PRODUCT 5 OF 9

Medication Disposal Kit — On-Site

Deactivate on site — nothing ships back

A deactivation container: add water, drop in medications, and the compound renders them non-retrievable at the customer's own site.

SKU	Size	MSRP
ERX-MED-005G-OS-EA	0.5 gallon	$40
ERX-MED-125G-OS-EA	1.25 gallon	$45
ERX-MED-025G-OS-EA	2.5 gallon	$65
ERX-MED-05G-OS-EA	5 gallon	$125
ERX-MED-15G-OS-EA	15 gallon	$350

WHAT GOES IN

- Unused or expired medications for in-house deactivation

NEVER GOES IN

- ✖ Sharps, chemo or hazardous drugs
- ✖ Anything the customer needs a Certificate of Destruction for → use a **mail-back kit**

Who buys it	Nursing homes, hospice, correctional and behavioral health, and any site that wants low-cost in-house deactivation.
Which size	The lowest-cost option in the line. Size to how much each nursing station or site deactivates between changes.
How it works	Add water, drop in medications, close. Discard the deactivated material per the facility's policy and follow the facility's own witnessing and logging procedures.
Rules that apply	Renders medications non-retrievable. Controlled substances destroyed on site must still be logged per the facility's DEA recordkeeping.
Customer receives	**None from Easy Rx Cycle — nothing is returned, so no Certificate of Destruction is issued**
Destruction method	Deactivated on site by the customer

CUSTOMERS ASK

Q: Why choose on-site?
Fastest and cheapest — no return shipping.

Q: What happens when it's full?
Send used containers back for documented destruction in an **Activated Charcoal Take-Back Kit**.

PRODUCT 6 OF 9

Controlled Substance Mail-Back Kit

DEA Schedules I–V · for DEA registrants

DEA-compliant mail-back for Schedules I–V, priced by weight. The customer fills out one list — we handle the DEA forms.

SKU	Size	MSRP
ERX-CTL-C05-EA	up to 5 lbs	$499
ERX-CTL-C10-EA	up to 10 lbs	$599
ERX-CTL-C20-EA	up to 20 lbs	$1,199
ERX-CTL-C100-EA	up to 100 lbs	$1,999

WHAT GOES IN

- Expired controlled substances
- Schedule II narcotics
- Schedules III–V
- Unused & returned Rx
- Patient-returned controls (LTC/hospice)
- Overstock & recalls
- Partial or wasted doses

NEVER GOES IN

- ✖ RCRA-hazardous drugs → **RCRA kit**
- ✖ Chemo → **Trace Chemo kit**
- ✖ Pathological waste
- ✖ Creditable in-date stock → consider reverse distribution for credit first

Who buys it	**DEA registrants only** — pharmacies, hospitals, LTC & hospice, veterinary, dental (sedation), surgery centers, pain management and clinics. They will need their DEA registration number.
Which size	Weigh what's going out and pick the tier that covers it. Over 100 lbs → custom quote. Optional expedite: +$250 (rush shipping and priority destruction).
How it works	After checkout, the customer completes the Drug Inventory Manifest (about 2 minutes), prints it and puts it in the box. Drugs go in the tamper-evident inner liner. Seal and ship.
Rules that apply	DEA 21 CFR 1317 (non-retrievable destruction) · DEA Form 222 for Schedule I/II transfers · DEA Form 41 for destruction · state Board of Pharmacy. Flushing or drain disposal is never compliant.
Customer receives	**DEA Form 222 (Schedule I/II) · Schedule III–V Transfer Form · DEA Form 41 · Certificate of Destruction**
Destruction method	Witnessed incineration to non-retrievable, at a DEA-registered facility

CUSTOMERS ASK

Q: What does the customer fill out?
Only the Drug Inventory Manifest: company, DEA number, state, and each drug's name, strength, NDC and package size.

Q: Who completes the 222 and Form 41?
We do. The customer signs nothing extra.

Q: How long do they keep records?
At least 2 years under DEA rules — longer if the state requires it.

PRODUCT 7 OF 9

Trace Chemo Mail-Back Kit

RCRA-empty chemotherapy waste (yellow)

Trace (RCRA-empty) chemotherapy waste per USP <800> — vials, tubing, gowns and gloves — in a yellow container, incinerated.

SKU	Size	MSRP
ERX-CHM-02G-EA	2 gallon	$105
ERX-CHM-08G-EA	8 gallon	$265
ERX-CHM-18G-EA	18 gallon	$310
ERX-CHM-28G-EA	28 gallon	$445

WHAT GOES IN

- RCRA-empty chemo vials & syringes
- Trace-contaminated gowns, gloves & PPE
- IV bags & tubing with trace residue only
- Empty drug containers & prep materials
- Chemo-contaminated sharps

NEVER GOES IN

- ✖ Bulk or unused chemo (visible drug left) → contact us
- ✖ P-listed drug waste → **RCRA kit**
- ✖ Non-chemo sharps or RMW

Who buys it	Oncology and infusion centers, compounding pharmacies, hospitals, surgery centers and veterinary oncology.
Which size	Size to weekly trace-chemo volume.
How it works	Segregate at the point of use into the yellow container. Seal the mailer and return it with the prepaid label.
Rules that apply	USP <800> · OSHA worker protection · EPA "RCRA-empty" (all contents removed by normal means, only a trace remains) · DOT · state rules. An IV bag with visible drug left in it is not RCRA-empty — that's bulk.
Customer receives	**Certificate of Destruction · Medical Waste Manifest**
Destruction method	Incineration

CUSTOMERS ASK

Q: What color is the container?
Yellow. Red = RMW, black = RCRA, blue = pharmaceutical.

Q: Must it be incinerated?
Yes.

PRODUCT 8 OF 9

Hazardous (RCRA) Mail-Back Kit

P-listed, U-listed & characteristic drugs (black)

RCRA-hazardous pharmaceutical waste destroyed to EPA rules. No DEA registration needed — it orders online like any other kit.

SKU	Size	MSRP
ERX-HAZ-02G-EA	2 gallon	$145
ERX-HAZ-08G-EA	8 gallon	$350
ERX-HAZ-18G-EA	18 gallon	$475

WHAT GOES IN

- P-listed drugs (e.g., warfarin over 0.3%, nicotine — P075)
- U-listed drugs (e.g., cyclophosphamide, mercury compounds)
- Ignitable (D001), corrosive (D002), toxic D-code wastes
- Empty P-listed containers that aren't RCRA-empty

NEVER GOES IN

- ✖ Non-hazardous drugs → **Pharmaceutical kit**
- ✖ Trace chemo → **Trace Chemo kit**
- ✖ Controlled substances → **Controlled Substance kit**

Who buys it	Pharmacies, hospitals, oncology, compounding, clinics, labs and schools generating hazardous pharmaceutical waste.
Which size	Pick by volume. Larger quantities — ask for a quote.
How it works	Segregate into the black container using the enclosed P-list / U-list guidance. Seal and ship with the prepaid label. Have the facility's EPA ID number ready if it has one.
Rules that apply	EPA RCRA (40 CFR 261) incl. the P and U lists · Subpart P (40 CFR 266): absolute ban on putting hazardous drug waste down any drain · state rules (often stricter) · DOT.
Customer receives	**Certificate of Destruction · Uniform Hazardous Waste Manifest (EPA Form 8700-22)**
Destruction method	Incineration at a permitted hazardous-waste facility (TSDF)

CUSTOMERS ASK

Q: Does the buyer need a DEA registration?
No. RCRA is EPA, not DEA.

Q: How do they know which drugs are hazardous?
The kit includes P-list/U-list guidance and our team can help. When unsure, treat it as hazardous.

Q: Is nicotine hazardous?
Yes — nicotine is P-listed (P075).

PRODUCT 9 OF 9

Activated Charcoal Take-Back Kit

Return used charcoal disposal containers by weight

Send back used activated-charcoal medication disposal containers — any brand, any size — for documented destruction. Priced by weight.

SKU	Size	MSRP
ERX-ACR-5LB-EA	up to 5 lbs	$100
ERX-ACR-25LB-EA	up to 25 lbs	$350
ERX-ACR-50LB-EA	up to 50 lbs	$600

WHAT GOES IN

- Used activated-charcoal disposal containers in any size (16 oz, 64 oz, 1 gallon and larger)
- As many containers as fit, up to the weight tier

NEVER GOES IN

- ✖ Loose medications → use the right **mail-back kit**
- ✖ Sharps or biohazard waste

Who buys it	Pharmacies, clinics, LTC & hospice and veterinary practices using charcoal disposal systems — including our On-Site kit.
Which size	Weigh the filled containers and pick the tier. Over 50 lbs: order multiple kits or ask for a freight quote.
How it works	Pack the containers in the lined box, fill out the enclosed disposal manifest (list what's being returned), seal and ship with the prepaid label.
Rules that apply	Destroyed at a DEA-registered facility as non-hazardous pharmaceutical waste.
Customer receives	**Certificate of Destruction · copy of the customer's disposal manifest**
Destruction method	Regulated destruction

CUSTOMERS ASK

Q: Does it have to be our brand?
No — any activated charcoal disposal product.

Q: Is shipping included?
Yes — prepaid both ways.

SECTION 5

Forms & documents

Customers buy compliance as much as disposal. This section covers every document that goes with our products: which waste it goes with, which SKUs, who fills it out, what's on it, and a sample of each. Samples use made-up customer data.

Every form at a glance

Document	Type of waste	Products
COD — Sharps	Needles, syringes, lancets, blades	Sharps
COD — Biohazard	Red-bag regulated medical waste	Biohazard / RMW
COD — Non-controlled drugs	Non-hazardous, non-controlled medications	Pharmaceutical
COD — Medication kits	Patients' medications (take-back)	Medication Disposal Mail-Back
COD — RCRA containers	P-, U- and D-coded hazardous drugs	Hazardous (RCRA)
COD — Controlled (I–V)	DEA Schedules I–V	Controlled Substance
COD — Trace chemo	RCRA-empty chemotherapy waste	Trace Chemo
COD — Charcoal containers	Used charcoal disposal containers	Activated Charcoal Take-Back
3–5 Form	Schedules III, IV, V	Controlled Substance
DEA Form 222	Schedules I & II	Controlled Substance
DEA Form 41	All controlled substances destroyed	Controlled Substance
RCRA Form (EPA 8700-22)	RCRA hazardous waste	Hazardous (RCRA)
Medical Waste Manifest	Regulated medical waste	Sharps · Biohazard · Trace Chemo
Drug Inventory Manifest	Filled out by the customer	Controlled Substance
Disposal Manifest	Filled out by the customer	Activated Charcoal Take-Back

THE ONE EXCEPTION

Medication Disposal — On-Site comes with no documents from Easy Rx Cycle: the customer deactivates medications at their own site and nothing ships back. If they need a Certificate, sell a mail-back kit.

SECTION 5

What we provide for each SKU

SKU	Product	Size	MSRP	Documents provided
ERX-SHP-01QT-EA	Sharps	1 quart	$55	COD — Sharps · Medical Waste Manifest
ERX-SHP-125G-EA	Sharps	1.25 gallon	$95	COD — Sharps · Medical Waste Manifest
ERX-SHP-02G-EA	Sharps	2 gallon	$75	COD — Sharps · Medical Waste Manifest
ERX-SHP-09G-EA	Sharps	9 gallon	$255	COD — Sharps · Medical Waste Manifest
ERX-SHP-18G-EA	Sharps	18 gallon	$285	COD — Sharps · Medical Waste Manifest
ERX-SHP-28G-EA	Sharps	28 gallon	$405	COD — Sharps · Medical Waste Manifest

ERX-ACR-50LB-EA	Activated Charcoal Take-Back	up to 50 lbs	$600	COD — Charcoal containers

COD = Certificate of Destruction. Controlled kits get a DEA Form 222 when they hold Schedule I/II drugs and a 3–5 Form when they hold Schedule III–V drugs.

SECTION 5

The process every mail-back order follows

Step	What happens
1. Kits ship to you	In bulk to your warehouse. Each kit includes a prepaid return label and instructions.
2. You sell the kit	Your customer buys it from you, from your stock.
3. Customer fills & seals	Following the kit's rules. Controlled kits include the customer's Drug Inventory Manifest; charcoal kits include a disposal manifest.
4. Received	We scan the return in. Controlled substances go to secured, access-controlled storage.
5. Processed	Containers and weights logged. Controlled: every drug line with schedule and count.
6. Quality check	A second person verifies everything before destruction.
7. Destroyed	By the stream's method: autoclave, incineration, witnessed incineration, or a permitted hazardous-waste facility.
8. Documents delivered	Certificate of Destruction plus the stream's forms. The customer keeps them for inspections.

Controlled substances: step by step

The selling line: **"You fill out one list. We handle the 222, the 3–5 Form, the Form 41 and the destruction record."**

#	Step
1	Customer gets the weight tier that covers what they're sending.
2	They complete the **Drug Inventory Manifest**: company, DEA number and state, then each drug's name, strength, NDC and package size. About 2 minutes.
3	They print it and put it in the box. Drugs go in the tamper-evident inner liner. Seal and ship with the prepaid label.
4	We receive it into secured storage and confirm the inventory list arrived.
5	Every drug line is logged — schedule, count, weight — with the registrant and DEA number, which we validate.
6	A second person verifies. Transfer paperwork is prepared: **Schedule I/II with an NDC DEA Form 222**; **Schedules III–V 3–5 Form**.
7	Witnessed destruction by incineration to non-retrievable, with two witnesses.
8	**DEA Form 41** and the **Certificate of Destruction** are completed and signed by hand. Originals are secured.
9	Required DEA reporting is completed and the documents are delivered.

RECORD KEEPING

Keep every Certificate and DEA form for at least **2 years** and EPA hazardous-waste manifests for at least **3 years** — longer where the state requires it. (General federal guidance; customers should confirm their state's rules.)

SECTION 5

The Certificate of Destruction

Every mail-back product comes with a Certificate of Destruction (COD). The format is the same for every stream; what changes is the destruction method, how the items are listed, and how it's signed.

	Non-controlled streams	Controlled substances
Streams	Sharps, biohazard, non-controlled drugs, medication kits, RCRA, trace chemo, charcoal	Schedules I–V
Items listed	Each container with its weight, plus a total	Every drug: name, strength, NDC, form, quantity
Extra fields	—	Client DEA number and the two witnesses
Signatures	Two electronic signatures (operator and CEO)	Signed by hand (operator and CEO)

Stream	Destruction method printed on the COD
Sharps · Biohazard	Autoclave sterilization
Non-controlled drugs · Medication kits · Trace chemo	Regulated incineration
RCRA hazardous	Incineration at a permitted TSDF
Controlled (I–V)	Witnessed incineration to non-retrievable — DEA-registered
Activated charcoal containers	Regulated destruction

SECTION 5 · FORMS

Certificate of Destruction — Sharps

Proof the customer's sharps container was received and destroyed by autoclave sterilization.

Type of waste	Sharps: needles, syringes, lancets, pen needles, auto-injectors, blades
Goes with SKUs	ERX-SHP-01QT · 125G · 02G · 09G · 18G · 28G
Customer fills out	Nothing
Who keeps it	The customer (keeps it for OSHA and state inspections)

WHAT'S ON IT

- Certificate number and issue date
- Facility (the customer) and destruction date
- Destruction method for the stream
- Statement that the materials were rendered non-retrievable and destroyed under applicable federal and state rules
- Method: Autoclave sterilization
- Items disposed: each container (type and size) with its weight, plus the total weight
- Two electronic signatures: the Easy Rx Cycle operator and the CEO

3–5 Form (Schedule III–V Transfer Form)

Documents the transfer of Schedule III–V drugs from the customer (the supplier) to Easy Rx Cycle (the purchaser). Easy Rx Cycle's legal name, Arkansas Redistributors, LLC, appears as the purchaser.

Type of waste	Controlled substances in Schedules III, IV and V (and any Schedule I/II item without an NDC)
Goes with SKUs	ERX-CTL-C05 · C10 · C20 · C100 — whenever the kit holds Schedule III–V drugs
Customer fills out	Nothing — we complete it from their Drug Inventory Manifest
Who keeps it	The customer (a copy for their DEA records); Easy Rx Cycle keeps the original

WHAT'S ON IT

- Purchaser: Arkansas Redistributors, LLC (Easy Rx Cycle), with our DEA registration
- Supplier: the customer's DEA number, name and address
- Date ordered
- Up to 20 lines: number of packages, package size, name of item, number received, date received, NDC, number shipped, date shipped
- Last line completed (must be 20 or less — more items means another form)

SECTION 5 · FORMS

DEA Form 222 (Schedule I & II)

The official DEA order form required by federal law for every transfer of Schedule I and II drugs. The official form is issued by DEA; the sample shows the data we print onto it.

Type of waste	Controlled substances in Schedules I and II with an NDC — for example oxycodone, hydrocodone, fentanyl, morphine, Adderall
Goes with SKUs	ERX-CTL-C05 · C10 · C20 · C100 — whenever the kit holds Schedule I or II drugs
Customer fills out	Nothing — we complete it from their Drug Inventory Manifest
Who keeps it	The customer (a copy for their DEA records); Easy Rx Cycle keeps the original

WHAT'S ON IT

- Supplier (the customer): DEA registration number, name and address
- Each line (up to 20): number of packages, package size, name of item
- National Drug Code (NDC) for every item
- Number shipped and date shipped; number received and date received
- Total number of lines completed

SAMPLE

SECTION 5 · FORMS

DEA Form 41 (Destruction Record)

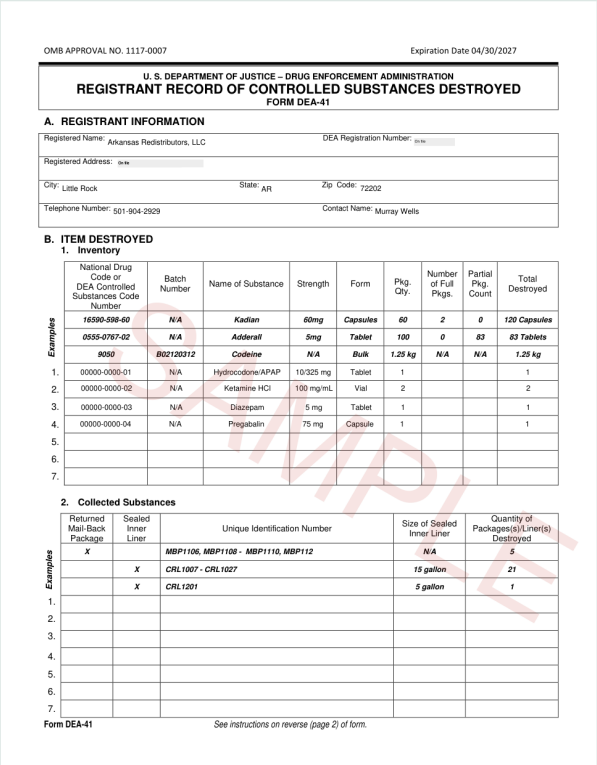

The official DEA "Registrant Record of Controlled Substances Destroyed." It documents what was destroyed, when, where, how and who witnessed it.

Type of waste	All controlled substances we destroy for the customer (Schedules I–V)
Goes with SKUs	ERX-CTL-C05 · C10 · C20 · C100
Customer fills out	Nothing
Who keeps it	Easy Rx Cycle keeps the original as the destroying registrant; the customer receives a copy on request

WHAT'S ON IT

- Section A — Registrant: Easy Rx Cycle's registered name, DEA number, address and contact
- Section B — Items destroyed: NDC, batch number, name of substance, strength, form, package quantity and total destroyed
- Collected substances (take-back liners), when applicable
- Section C — Method of destruction, date and location
- Two witnesses: printed names and handwritten signatures

SECTION 5 · FORMS

RCRA Form (Uniform Hazardous Waste Manifest, EPA Form 8700-22)

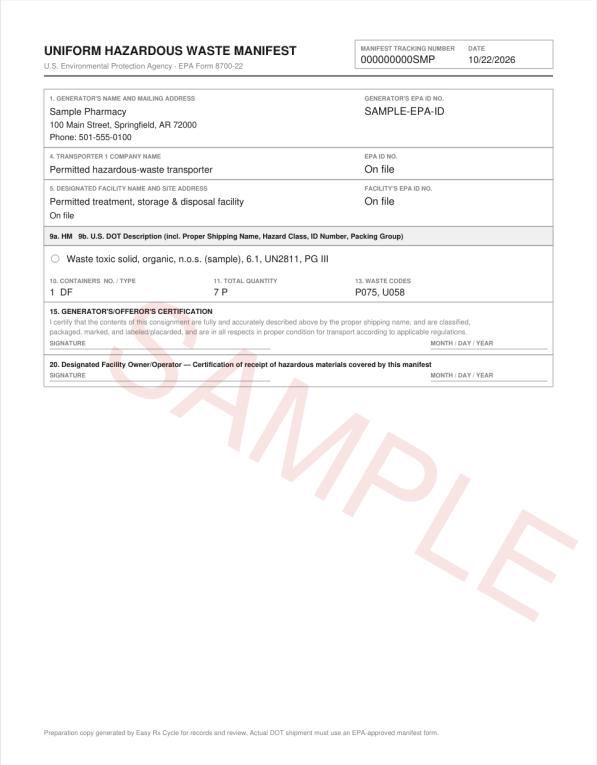

EPA's cradle-to-grave tracking form for hazardous waste — it follows the waste from the generator (the customer) to the transporter to the permitted treatment facility.

Type of waste	RCRA hazardous pharmaceutical waste: P-listed, U-listed and characteristic drugs
Goes with SKUs	ERX-HAZ-02G · 08G · 18G
Customer fills out	Their EPA ID number, if they have one
Who keeps it	The customer (keeps it at least 3 years), the transporter and the treatment facility

WHAT'S ON IT

- Manifest tracking number and date
- Generator (the customer): name, mailing address, phone and EPA ID number
- Transporter: company name and EPA ID number
- Designated facility (TSDF): name, address and EPA ID number
- Waste: U.S. DOT description (proper shipping name, hazard class, UN number, packing group), number and type of containers, total quantity, EPA waste codes (e.g., P075)
- Generator's certification and the facility's certification of receipt

10. CONTAINERS NO. / TYPE	11. TOTAL QUANTITY	13. WASTE CODES
1 DF	7 P	P075, U058

15. GENERATOR'S/OFFEROR'S CERTIFICATION
I certify that the contents of this consignment are fully and accurately described above by the proper shipping name, and are classified, packaged, marked, and labeled/placarded, and are in all respects in proper condition for transport according to applicable regulations.
SIGNATURE — MONTH / DAY / YEAR

20. Designated Facility Owner/Operator — Certification of receipt of hazardous materials covered by this manifest
SIGNATURE — MONTH / DAY / YEAR

SAMPLE

Preparation copy generated by Easy Rx Cycle for records and review. Actual DOT shipment must use an EPA-approved manifest form.

SECTION 5 · FORMS

Medical Waste Manifest

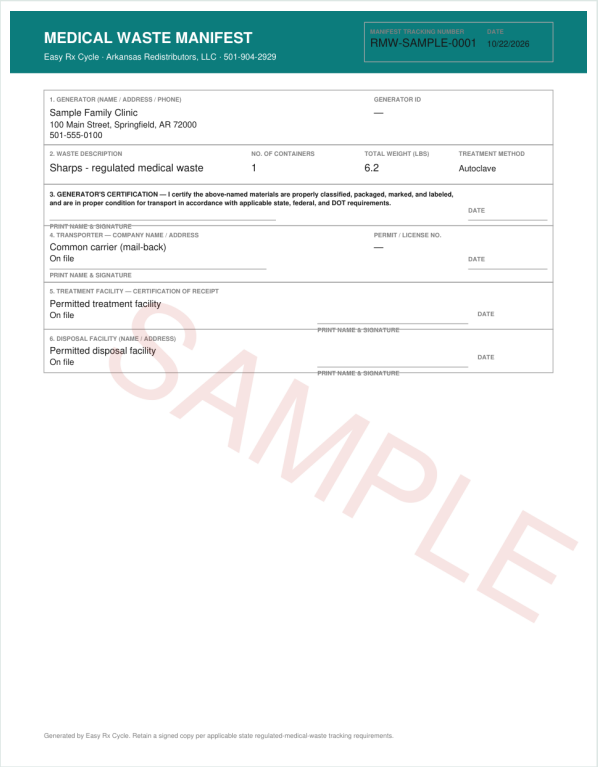

Tracks regulated medical waste from the customer through transport, treatment and disposal. Many states require it.

Type of waste	Regulated medical waste: sharps, biohazard (red bag) and trace chemo
Goes with SKUs	ERX-SHP-* · ERX-BIO-* · ERX-CHM-*
Customer fills out	Nothing
Who keeps it	The customer (keeps a signed copy per their state's tracking rules)

WHAT'S ON IT

- Manifest tracking number and date
- Generator (the customer): name, address, phone and generator ID if the state assigns one
- Waste description, number of containers, total weight and treatment method
- Generator certification: properly classified, packaged, marked and labeled
- Transporter, treatment facility and disposal facility — each with name, signature and date

SAMPLE

SECTION 5 · FORMS

Forms the customer fills out

CONTROLLED SUBSTANCE KIT

Drug Inventory Manifest

The one list the customer completes (about 2 minutes) and encloses in the box. We use it to prepare their DEA Form 222, 3–5 Form and Form 41.

- Company name, DEA registration number and state
- Each drug: name, strength, NDC and package size
- Printed and placed in the box with the drugs

ACTIVATED CHARCOAL TAKE-BACK KIT

Disposal Manifest

A list of the charcoal containers being returned, enclosed in the box. A copy comes back with the Certificate of Destruction.

- Customer information
- Containers being returned: sizes and counts

HAZARDOUS (RCRA) KIT

EPA ID number

Not a form, but the customer should have their facility's EPA ID number ready if they have one. It goes on the RCRA Form.

SECTION 6

Selling Easy Rx Cycle

How we position against the big haulers

- No contract, no route fees, no automatic price increases.
- One vendor for every stream, from sharps to controlled substances.
- Destruction, not just hauling — with a Certificate of Destruction on every mail-back order.
- We handle the DEA paperwork on controlled substances. The customer fills out one list.

What your customers will say

They say	You say
"We already use a big hauler."	Keep them for what they do well. Mail-back fills the gaps — controlled substances, small volumes, extra locations — with no contract.
"We use a reverse distributor."	Keep them for credit-eligible stock. We destroy what doesn't qualify for credit, with a Certificate of Destruction.
"We just throw it out / flush it."	Drug waste can't go down the drain, and controlled substances must be destroyed to DEA's non-retrievable standard with records.
"Too expensive."	One kit with a prepaid return label, destruction and documentation included. No monthly fees, route charges or contract.
"We don't generate much."	That's who mail-back is for. Pick a size they'll fill in a few months and order again when it's full.
"An inspector has never asked."	DEA, EPA, OSHA and the state board can all ask. The Certificate of Destruction is the answer that's ready when they do.

What reps ask us

You ask	The answer
"Am I liable for the waste?"	No. You sell an empty kit. The waste goes from your customer directly to Easy Rx Cycle, and the DEA transfer is between your customer (the registrant) and us. You never take possession of waste or sign DEA forms.
"How much should I stock?"	Start with the fast movers (Section 2) and reorder in bulk as they sell.
"Is it worth carrying?"	Disposal is a consumable. Every customer refills on a cycle, so one placement turns into repeat orders.
"Who answers compliance questions?"	We do. Bring us into the call, or have your customer call 501-904-2929.
"Can anyone buy the Controlled kit?"	No — DEA registrants only. We validate the DEA number when the kit comes back. Non-registrants collecting patients' medications use the Medication Disposal kits.

SECTION 6

Talk tracks

30 SECONDS, IN PERSON OR ON THE PHONE

The pitch

"Quick one — how are you handling expired meds and sharps right now? We carry Easy Rx Cycle mail-back kits. You fill it, seal it and send it back with the prepaid label, and they destroy it and send you a Certificate of Destruction for your records. No pickups, no contract. For controlled substances they even complete the DEA forms — you just fill out one list. Want me to add a kit to your next order?"

EMAIL

Subject: Disposal on your next order

Hi [Name] — quick add-on idea for your next order. We now carry Easy Rx Cycle mail-back kits for sharps, expired medications and controlled substances. Fill the kit, mail it back prepaid, and you get a Certificate of Destruction for your files — no hauler contract or route fees. For your practice I'd start with [kit]. Want me to add it?

VOICEMAIL

Leave this

"Hi [Name], it's [you] from [distributor]. We've added compliant mail-back disposal for sharps and expired drugs, including controlled substances, with the DEA paperwork handled for you. I can add it to your next order. Call me at [number]."

AFTER THE FIRST ORDER

Keep it going

Check back as the container fills — most offices refill on a regular cycle. Then look for the next stream: a dental office on sharps usually has expired medications too, and a vet on pharmaceutical kits usually has expired controls.

SECTION 7

Get certified

When you know this material, take the Easy Rx Cycle Product & Compliance Certification. Pass it and we email you a certificate showing you know what you're selling.

1
Study
This playbook — especially the forms section and Appendices A and B.

2
Go online
easyrxcycle.com/partners/training

3
Take the test
44 questions across 11 modules.

4
Score 80%+
Your certificate is emailed to you as a PDF.

The modules

#	Module	Covers
1	The basics	9 practice questions in Appendix B
2	Sharps	8 practice questions in Appendix B
3	Biohazard / regulated medical waste	8 practice questions in Appendix B
4	Pharmaceutical (non-controlled)	8 practice questions in Appendix B
5	Medication Disposal Kits	9 practice questions in Appendix B
6	Controlled substances	11 practice questions in Appendix B
7	Trace chemotherapy	7 practice questions in Appendix B
8	Hazardous (RCRA)	9 practice questions in Appendix B
9	Activated Charcoal Take-Back	6 practice questions in Appendix B
10	Forms & documents	12 practice questions in Appendix B
11	Ordering & selling	9 practice questions in Appendix B

- Retake it as often as you like — each attempt draws a new set of questions.
- Your result shows which modules to review if you don't pass.
- Every certificate has a number your customers or your manager can verify online.

APPENDIX A

Appendix A: Waste types explained

What each waste stream is, how to recognize it, who regulates it, how it's destroyed, and the mistakes to avoid. Learn this and you can answer almost any customer question — and pass the certification test.

Color	Stream	Kit
Red	Sharps and regulated medical waste	Sharps · Biohazard
Blue	Non-hazardous pharmaceutical	Pharmaceutical
Yellow	Trace chemotherapy	Trace Chemo
Black	RCRA hazardous pharmaceutical	Hazardous (RCRA)

Sharps	Red container
What it is	Any device that can puncture or cut skin and may be contaminated: needles, syringes with needles, lancets, pen needles, auto-injectors, IV catheters, scalpel and suture blades, and blood-contaminated broken glass.
Regulated by	OSHA Bloodborne Pathogens Standard (29 CFR 1910.1030) for workers; DOT for shipping; state medical-waste rules for treatment. Mail-back is legal in all 50 states.
Destroyed by	Autoclave sterilization
Common mistakes	Overfilling past the fill line · recapping or breaking needles · using milk jugs or coffee cans · putting chemo-contaminated sharps here (they go in Trace Chemo).

Regulated medical waste (biohazard)	Red bag inside a rigid box
What it is	Waste saturated or caked with blood or other potentially infectious material (OPIM): blood-soaked gauze and dressings, contaminated PPE, cultures, stocks and swabs. The test: would it drip or flake blood if squeezed? If not, it's usually regular trash.
Regulated by	States are the main authority (rules vary), plus OSHA and DOT.
Destroyed by	Autoclave sterilization
Common mistakes	Putting loose sharps in the red bag · shipping the red bag without the rigid box · sending pathological waste (tissue), which we don't accept.

Non-hazardous pharmaceutical waste	Blue container
What it is	Medications that are neither DEA-controlled nor RCRA-hazardous: expired or unused prescription drugs, OTC drugs, samples, vitamins and supplements, compounding prep waste, IV bags with no hazardous drug.
Regulated by	EPA (no sewering of drug waste), state Board of Pharmacy and state environmental rules.
Destroyed by	Regulated incineration
Common mistakes	Mixing in controlled substances (Controlled kit) or P/U-listed drugs (RCRA kit). When unsure whether a drug is hazardous, treat it as hazardous.

Controlled substances (DEA Schedules I–V)	Tamper-evident inner liner
What it is	Drugs regulated by DEA under the Controlled Substances Act, grouped by abuse potential. A registrant's (pharmacy, practice, hospital) own controlled inventory must be transferred with DEA paperwork and destroyed to a non-retrievable state.
Regulated by	DEA 21 CFR 1317 (non-retrievable destruction) · DEA Form 222 for Schedule I/II transfers · DEA Form 41 for destruction · state Board of Pharmacy.
Destroyed by	Witnessed incineration to non-retrievable
Common mistakes	Selling the Controlled kit to non-registrants · mixing RCRA or chemo drugs in · forgetting the Drug Inventory Manifest.

RCRA hazardous pharmaceutical waste	Black container
What it is	Drugs EPA lists or characterizes as hazardous under RCRA. **P-listed** (acutely hazardous, e.g., nicotine P075, warfarin over 0.3%), **U-listed** (toxic, e.g., cyclophosphamide, mercury compounds), and **characteristic** wastes: D001 ignitable, D002 corrosive, D003 reactive, D004–D043 toxic.
Regulated by	EPA RCRA (40 CFR 261) · Subpart P (40 CFR 266): absolute ban on sewering hazardous waste pharmaceuticals · DOT · state rules (often stricter). EPA, not DEA — no DEA registration needed.
Destroyed by	Incineration at a permitted hazardous-waste facility (TSDF)
Common mistakes	Treating nicotine products as non-hazardous · pouring anything down a drain · not having the facility's EPA ID ready.

Trace chemotherapy waste	Yellow container
What it is	Items that held or touched chemotherapy but are **RCRA-empty** — all contents removed by normal means, only a trace left: empty vials and syringes, IV bags and tubing with trace residue, gowns, gloves and prep materials, chemo-contaminated sharps.
Regulated by	USP <800> (hazardous drug handling) · OSHA · EPA "RCRA-empty" rule · DOT · state rules.
Destroyed by	Incineration
Common mistakes	Sending bulk chemo (visible drug left — contact us) · putting P-listed drug waste here (RCRA kit) · putting non-chemo sharps here.

Patient take-back medications	Tamper-evident mailer
What it is	Medications that belong to patients or consumers — collected by a pharmacy, LTC facility, clinic or program. Controlled and non-controlled can be commingled. The sealed liner is not opened or inventoried.
Regulated by	DEA take-back rules (21 CFR 1317, Secure and Responsible Drug Disposal Act). Offering mail-back packages doesn't require becoming a DEA authorized collector; a collection kiosk does.
Destroyed by	Regulated incineration (mail-back) · deactivated on site (On-Site kit)
Common mistakes	Using it for a registrant's own controlled inventory · sending inhalers, aerosols or sharps.

Used activated-charcoal disposal containers	Lined return box
What it is	Point-of-use drug deactivation containers (any brand, any size) that are full and need documented destruction — including our Medication Disposal On-Site kits.
Regulated by	Destroyed at a DEA-registered facility as non-hazardous pharmaceutical waste.
Destroyed by	Regulated destruction
Common mistakes	Sending loose medications instead of containers · going over the weight tier (order more kits or ask for freight).

DEA controlled substance schedules

Schedule	What it means	Examples
I	No accepted medical use; high abuse potential	Heroin, LSD, marijuana (federally), ecstasy
II	Accepted medical use; high abuse potential	Oxycodone, hydrocodone, fentanyl, morphine, Adderall, methylphenidate
III	Moderate to low dependence potential	Ketamine, testosterone and anabolic steroids, buprenorphine, codeine combinations (Tylenol #3)
IV	Low abuse potential	Alprazolam, diazepam, lorazepam, tramadol, zolpidem, phenobarbital
V	Lowest abuse potential	Pregabalin, lacosamide, low-dose codeine cough preparations

Schedule I/II transfers use DEA Form 222. Schedules III–V use the 3–5 Form. All controlled destruction is recorded on DEA Form 41.

Out of scope — we don't accept

- ✖ Pathological waste (human or animal tissue)
- ✖ Bulk chemotherapy (visible drug remaining) — contact us
- ✖ Formaldehyde and laboratory chemicals
- ✖ Radioactive waste
- ✖ Inhalers and aerosols in the Medication Disposal kits

APPENDIX B

Appendix B: Practice questions

These are the questions the certification test draws from. The test picks 4 from each module (44 in all) and you need 80% to pass. Answers are in Appendix C.

Module 1: The basics

1. What does Easy Rx Cycle do?

A. Hauls general trash on a route
B. Buys back expired drugs for credit
C. DEA-registered destruction of pharmaceutical and medical waste through prepaid mail-back kits
D. Sells new medications to pharmacies

2. Which rule prevents most ordering and shipping mistakes?

A. Fill every kit to the top
B. One waste stream per kit
C. Mix streams to save shipping
D. Always order the largest size

3. A customer has used needles and expired non-controlled tablets. What do they need?

A. A Biohazard kit
B. One Pharmaceutical kit for both
C. A Sharps kit and a Pharmaceutical kit
D. One Sharps kit for both

4. Which of these does Easy Rx Cycle NOT accept?

A. Sharps
B. Pathological waste (human or animal tissue)
C. Controlled substances
D. RCRA hazardous drugs

5. What document proves destruction on every mail-back order?

A. The invoice
B. The Certificate of Destruction
C. The shipping label
D. The packing slip

6. Which statement should you NOT make to a customer?

A. You get a Certificate of Destruction on every mail-back order
B. Mail-back ships to all 50 states
C. You can log in to a portal to see your records
D. We are DEA registered

7. Can drug waste be flushed or poured down a drain?

A. Yes, if it is diluted
B. Only non-controlled drugs
C. Only in small amounts
D. No. Drug waste should never be sewered

8. A customer has a waste stream you're unsure about. What do you do?

A. Tell them to throw it away
B. Guess the closest kit
C. Have them ship it and see
D. Call Easy Rx Cycle at 501-904-2929 before they ship

9. A customer asks for Easy Rx Cycle's DEA registration number. What do you say?
- **A.** It's available on request through Easy Rx Cycle
- **B.** Make one up
- **C.** We don't have one
- **D.** Read it from the kit label

Module 2: Sharps

10. Which item belongs in the Sharps kit?
- **A.** Chemo-contaminated needles
- **B.** Blood-soaked gauze
- **C.** Insulin pen needles
- **D.** Expired tablets

11. How full can a sharps container be filled?
- **A.** To the fill line, about three-quarters full
- **B.** To the very top
- **C.** Half full only
- **D.** Until the lid barely closes

12. Where do chemo-contaminated needles go?
- **A.** Biohazard kit
- **B.** Pharmaceutical kit
- **C.** Sharps kit
- **D.** Trace Chemo kit

13. How are sharps destroyed?
- **A.** Landfilled untreated
- **B.** Autoclave sterilization
- **C.** Recycled
- **D.** Deactivated with charcoal

14. Which federal standard covers handling sharps in the workplace?
- **A.** OSHA Bloodborne Pathogens Standard (29 CFR 1910.1030)
- **B.** USP <800>
- **C.** DEA 21 CFR 1317
- **D.** RCRA Subpart P

15. What documents does a Sharps customer receive?
- **A.** DEA Form 41
- **B.** Nothing
- **C.** EPA Form 8700-22
- **D.** Certificate of Destruction and Medical Waste Manifest

16. Can a home injector mail back sharps in a milk jug?
- **A.** Only if it is taped shut
- **B.** No. Sharps must be in the FDA-cleared container
- **C.** Yes
- **D.** Only in a coffee can

17. Which sharps size fits a single home user or a very low-volume office?
- **A.** 1 quart
- **B.** 28 gallon
- **C.** 18 gallon
- **D.** 9 gallon

Module 3: Biohazard / regulated medical waste

18. What's the simple test for whether an item is regulated medical waste?
- **A.** Would it drip or flake blood or other potentially infectious material if squeezed?
- **B.** Did it touch a patient?
- **C.** Is it plastic?
- **D.** Is it red?

19. A glove with a single dot of dried blood is usually:
- **A.** Regulated medical waste
- **B.** Regular trash
- **C.** Hazardous waste
- **D.** Pathological waste

20. Can loose sharps go in the Biohazard kit?
- **A.** Only needles
- **B.** Yes
- **C.** No. Sharps go in the Sharps kit
- **D.** Only blades

21. Is the red bag alone an acceptable shipping container?
- **A.** Only for small amounts
- **B.** No. It must be inside the rigid, UN-rated box
- **C.** Only if double-bagged
- **D.** Yes

22. Does the Biohazard kit accept pathological waste (tissue)?
- **A.** Only animal tissue
- **B.** Only in the 28 gallon size
- **C.** No. It is not accepted
- **D.** Yes

23. Who is the main regulator of regulated medical waste?
- **A.** The states (rules vary by state)
- **B.** USPS only
- **C.** DEA
- **D.** FDA

24. How is biohazard waste destroyed?
- **A.** Autoclave sterilization
- **B.** Landfill
- **C.** Witnessed incineration
- **D.** Charcoal deactivation

25. Which of these belongs in the Biohazard kit?
- **A.** Insulin pen needles
- **B.** Nicotine gum
- **C.** Expired antibiotics
- **D.** Blood-soaked gauze and dressings

Module 4: Pharmaceutical (non-controlled)

26. What goes in the Pharmaceutical kit?
- **A.** Nicotine patches
- **B.** Used needles
- **C.** Expired non-controlled prescription drugs, OTC drugs and samples
- **D.** Expired hydrocodone

27. A clinic has expired hydrocodone. Which kit?
- **A.** RCRA
- **B.** Medication Disposal On-Site
- **C.** Pharmaceutical
- **D.** Controlled Substance

28. Expired nicotine gum and warfarin tablets (P-listed) go in:
- **A.** Biohazard kit
- **B.** Sharps kit
- **C.** Pharmaceutical kit
- **D.** Hazardous (RCRA) kit

29. A customer isn't sure whether a drug is hazardous. What should they do?
- **A.** Treat it as hazardous
- **B.** Treat it as non-hazardous
- **C.** Flush it
- **D.** Mix it with sharps

30. How is pharmaceutical waste destroyed?
- **A.** Autoclave
- **B.** Recycled
- **C.** Regulated incineration
- **D.** Landfill

31. What does the Pharmaceutical kit Certificate of Destruction list?
- **A.** The containers and their weights
- **B.** Two witness signatures
- **C.** EPA waste codes
- **D.** Each drug's NDC

32. What color is the pharmaceutical waste container?
- **A.** Blue
- **B.** Red
- **C.** Black
- **D.** Yellow

33. An IV bag that held only saline with no hazardous drug goes in:
- **A.** Pharmaceutical kit
- **B.** Trace Chemo kit
- **C.** RCRA kit
- **D.** Controlled kit

Module 5: Medication Disposal Kits

34. The Medication Disposal Mail-Back kit is designed for:
- **A.** A practice's own controlled inventory
- **B.** Sharps
- **C.** Chemo waste
- **D.** Patients' unused or expired medications (take-back)

35. Can a pharmacy put its own expired controlled inventory in the Medication Mail-Back kit?
- **A.** Only if it's under 5 lbs
- **B.** Yes
- **C.** No. A registrant's own controlled inventory uses the Controlled Substance kit
- **D.** Only Schedule V

36. Can patients' controlled substances go in the Medication Mail-Back kit?
- **A.** No, never
- **B.** Only Schedule II
- **C.** Only with a DEA Form 222
- **D.** Yes, commingled with their other medications

37. Once a Medication Mail-Back inner liner is sealed, it is:
- **A.** Opened and counted
- **B.** Sorted by schedule
- **C.** Returned to the customer
- **D.** Not opened or inventoried

38. How does the Medication Disposal On-Site kit work?
- **A.** It's picked up weekly
- **B.** It ships back to us for incineration
- **C.** The customer adds water and the compound deactivates medications at their site
- **D.** It sterilizes needles

39. Does the On-Site kit come with a Certificate of Destruction?
- **A.** Only for controlled substances
- **B.** Only on request
- **C.** Yes, always
- **D.** No. Nothing ships back, so no Certificate is issued

40. Where do full activated-charcoal disposal containers go?
- **A.** The Biohazard kit
- **B.** The Sharps kit
- **C.** The trash
- **D.** The Activated Charcoal Take-Back kit

41. Does offering patient mail-back packages require becoming a DEA authorized collector?
- **A.** Yes, always
- **B.** Only for pharmacies
- **C.** Only in Arkansas
- **D.** No. An on-site collection kiosk does, mail-back packages don't

42. Which of these is NOT accepted in the Medication Disposal kits?
- **A.** Patches and creams
- **B.** Inhalers and aerosols
- **C.** Pills and capsules
- **D.** Liquids in original containers

Module 6: Controlled substances

43. Who can buy the Controlled Substance kit?
- **A.** DEA registrants only
- **B.** Only hospitals
- **C.** Anyone
- **D.** Patients only

44. What does the customer fill out for a Controlled kit?
- **A.** The EPA manifest
- **B.** The Drug Inventory Manifest
- **C.** DEA Form 41
- **D.** DEA Form 222

45. Schedule II drugs with an NDC are transferred on:
- **A.** EPA Form 8700-22
- **B.** The 3–5 Form
- **C.** The Medical Waste Manifest
- **D.** DEA Form 222

46. Schedule III, IV and V drugs are transferred on:
- **A.** No form is needed
- **B.** DEA Form 106
- **C.** The 3–5 Form (Schedule III–V transfer form)
- **D.** DEA Form 222

47. What does DEA Form 41 record?
- **A.** The customer's invoice
- **B.** A theft or loss
- **C.** The order of new drugs
- **D.** The destruction: what was destroyed, when, how and who witnessed it

48. Who completes the DEA Form 222 and Form 41?
- **A.** The carrier
- **B.** The customer
- **C.** Easy Rx Cycle
- **D.** The distributor rep

49. Controlled substances must be destroyed to which standard?
- **A.** Recyclable
- **B.** Non-retrievable (21 CFR 1317)
- **C.** Diluted
- **D.** Landfill-ready

50. How is the Controlled kit priced?
- **A.** Per NDC
- **B.** Monthly subscription only
- **C.** Per pill
- **D.** By weight tier: up to 5, 10, 20 or 100 lbs

51. How long should customers keep DEA records?
- **A.** They don't need to
- **B.** 6 months
- **C.** At least 2 years (longer if the state requires)
- **D.** 30 days

52. How many witnesses are present for controlled destruction?
- **A.** One
- **B.** Two
- **C.** Five
- **D.** None

53. A customer has in-date, credit-eligible controlled stock. What should they consider first?
- **A.** Reverse distribution for credit
- **B.** The Sharps kit
- **C.** The On-Site kit
- **D.** Flushing it

Module 7: Trace chemotherapy

54. What does "RCRA-empty" mean?
- **A.** The container was rinsed with water
- **B.** The container is unopened
- **C.** All contents removed by normal means; only a trace remains
- **D.** Half the drug is left

55. An IV bag with visible chemo drug left in it is:
- **A.** Trace chemo
- **B.** Non-hazardous pharmaceutical
- **C.** Bulk chemo, not accepted as trace (contact us)
- **D.** Biohazard

56. What color is the Trace Chemo container?
- **A.** Blue
- **B.** Red
- **C.** Yellow
- **D.** Black

57. Which standard governs handling hazardous drugs like chemo in healthcare?
- **A.** OSHA 1910.1030 only
- **B.** USP <800>
- **C.** DEA Form 41
- **D.** HIPAA

58. How is trace chemo destroyed?
- **A.** Autoclave
- **B.** Landfill
- **C.** Charcoal deactivation
- **D.** Incineration

59. Chemo-contaminated gowns and gloves go in:
- **A.** Trace Chemo kit
- **B.** Pharmaceutical kit
- **C.** Biohazard kit
- **D.** Regular trash

60. Match the color code: black container =
- **A.** Sharps
- **B.** RCRA hazardous
- **C.** Pharmaceutical
- **D.** Trace chemo

Module 8: Hazardous (RCRA)

61. Does a customer need a DEA registration to buy the RCRA kit?
- **A.** Only in some states
- **B.** No. RCRA is EPA, not DEA
- **C.** Yes
- **D.** Only for P-listed drugs

62. Nicotine (gum, patches, e-liquid) is:
- **A.** A controlled substance
- **B.** Regulated medical waste
- **C.** P-listed hazardous waste (P075)
- **D.** Non-hazardous

63. The P and U lists of hazardous wastes are in:
- **A.** 29 CFR 1910.1030
- **B.** 21 CFR 1317
- **C.** 40 CFR 261
- **D.** USP <800>

64. What does EPA's Subpart P (40 CFR 266) ban?
- **A.** Incineration
- **B.** Putting hazardous waste pharmaceuticals down any drain
- **C.** Mail-back kits
- **D.** Autoclaving

65. What color is the RCRA container?
- **A.** Blue
- **B.** Yellow
- **C.** Red
- **D.** Black

66. What documents does an RCRA customer receive?
- **A.** DEA Form 41
- **B.** Certificate of Destruction and Uniform Hazardous Waste Manifest (EPA Form 8700-22)
- **C.** Nothing
- **D.** Medical Waste Manifest only

67. Where is RCRA waste destroyed?
- **A.** Incineration at a permitted hazardous-waste facility (TSDF)
- **B.** Autoclave
- **C.** On site by the customer
- **D.** Landfill

68. EPA waste code D001 means the waste is:
- **A.** Corrosive
- **B.** Reactive
- **C.** Ignitable
- **D.** Infectious

69. What should an RCRA customer have ready if they have one?
- **A.** Their DEA number
- **B.** An NPI number
- **C.** Their facility's EPA ID number
- **D.** A DEA Form 222

Module 9: Activated Charcoal Take-Back

70. What is the Activated Charcoal Take-Back kit for?
- **A.** Returning used activated-charcoal disposal containers for documented destruction
- **B.** Sharps
- **C.** Loose pills
- **D.** Chemo

71. Do the charcoal containers have to be Easy Rx Cycle brand?
- **A.** Yes
- **B.** No. Any brand, any size
- **C.** Only 64 oz
- **D.** Only 1 gallon

72. How is the Charcoal Take-Back kit priced?
- **A.** By container count
- **B.** Per pill
- **C.** Monthly
- **D.** By weight: up to 5, 25 or 50 lbs

73. What does the customer fill out for a Charcoal kit?
- **A.** Nothing
- **B.** The enclosed disposal manifest listing the containers returned
- **C.** EPA Form 8700-22
- **D.** DEA Form 222

74. A customer has 70 lbs of charcoal containers. What do you do?
- **A.** Order multiple kits or ask Easy Rx Cycle for a freight quote
- **B.** Force them into one kit
- **C.** Use a Sharps kit
- **D.** Throw half away

75. Can loose medications go in the Charcoal Take-Back kit?
- **A.** Only pills
- **B.** Only liquids
- **C.** Yes
- **D.** No. Use the right mail-back kit

Module 10: Forms & documents

76. Which document comes with every mail-back product?
- **A.** EPA Form 8700-22
- **B.** DEA Form 41
- **C.** Certificate of Destruction
- **D.** DEA Form 222

77. A Sharps Certificate of Destruction lists:
- **A.** Two witness signatures
- **B.** Containers and weights, with autoclave as the method
- **C.** EPA waste codes
- **D.** Each drug's NDC

78. A controlled-substance Certificate of Destruction lists:
- **A.** Only the invoice total
- **B.** Nothing but a date
- **C.** Containers by weight only
- **D.** Each drug's name, strength, NDC, form and quantity, plus the client DEA number and witnesses

79. How are non-controlled Certificates of Destruction signed?
- **A.** Not signed
- **B.** By a DEA agent
- **C.** By the customer
- **D.** Electronically, by the operator and the CEO

80. On the 3–5 Form, who is the purchaser and who is the supplier?
- **A.** Purchaser: DEA; supplier: the carrier
- **B.** Purchaser: Arkansas Redistributors, LLC (Easy Rx Cycle); supplier: the customer
- **C.** Purchaser: the customer; supplier: Easy Rx Cycle
- **D.** Both are the distributor

81. How many drug lines fit on one DEA Form 222 or 3–5 Form?
- **A.** 5
- **B.** 10
- **C.** 20
- **D.** Unlimited

82. DEA Form 41 is officially called the:
- **A.** Report of Theft or Loss
- **B.** Registrant Record of Controlled Substances Destroyed
- **C.** Application for Registration
- **D.** Order Form for Schedule I and II

83. EPA Form 8700-22 tracks hazardous waste:
- **A.** Only for sharps
- **B.** Only for controlled drugs
- **C.** Cradle to grave: generator, transporter, treatment facility
- **D.** Only at the customer's site

84. Which products come with a Medical Waste Manifest?
- **A.** Pharmaceutical only
- **B.** Controlled and RCRA
- **C.** Medication On-Site
- **D.** Sharps and Biohazard

85. What does the Medication Disposal On-Site kit come with from Easy Rx Cycle?
- **A.** A Certificate of Destruction
- **B.** DEA Form 41
- **C.** No documents. Nothing ships back
- **D.** An EPA manifest

86. How long should customers keep EPA hazardous waste manifests?
- **A.** At least 3 years
- **B.** They can discard them
- **C.** 30 days
- **D.** 1 year

87. Which forms come with a Controlled kit that contained Schedule II and Schedule IV drugs?
- **A.** EPA Form 8700-22
- **B.** Medical Waste Manifest
- **C.** DEA Form 222, the 3–5 Form, DEA Form 41 and the Certificate of Destruction
- **D.** Certificate of Destruction only

Module 11: Ordering & selling

88. Where does a distributor place bulk orders?
- **A.** By fax
- **B.** In the Easy Rx Cycle partner portal (Place an Order)
- **C.** By text message
- **D.** On a public marketplace

89. Where are distributor bulk orders shipped?
- **A.** To each end customer
- **B.** To the carrier
- **C.** To the DEA
- **D.** To the distributor's warehouse

90. Does the waste ever pass through the distributor?
- **A.** Only controlled waste
- **B.** No. The customer mails the full kit directly to Easy Rx Cycle
- **C.** Yes, always
- **D.** Only RCRA waste

91. What does every kit include for the return trip?
- **A.** Nothing
- **B.** A pickup appointment
- **C.** A DEA Form 222
- **D.** A prepaid return label

92. When should you bring Easy Rx Cycle into a deal?
- **A.** Only for sharps
- **B.** Never
- **C.** Pickups, multiple sites, volume above the largest kit, or law-enforcement destruction
- **D.** Only after the customer ships

93. A customer says, "We already use a big hauler." Best answer?
- **A.** "Haulers are illegal."
- **B.** "Keep them for what they do well. Mail-back fills the gaps with no contract."
- **C.** "Cancel them today."
- **D.** "Then you don't need us."

94. A customer says, "We just flush it." Best answer?
- **A.** "Drug waste can't go down the drain, and controlled substances must be destroyed to DEA's non-retrievable standard with records."
- **B.** "That's fine."
- **C.** "Dilute it first."
- **D.** "Only flush at night."

95. Which price is shown in this playbook?
- **A.** Subscription price
- **B.** Freight cost
- **C.** Wholesale cost
- **D.** MSRP

96. A customer wants a Controlled kit but isn't DEA-registered and collects patients' medications. What do you sell?

A. The Controlled kit anyway
B. A Medication Disposal kit
C. Nothing
D. A Sharps kit

APPENDIX C

Appendix C: Answer key

#	Answer	Why
1	C	We sell prepaid mail-back kits for every regulated pharmaceutical and medical waste stream, then destroy the contents and document it.
2	B	Each kit takes one kind of waste. Mixing streams breaks the destruction rules for both.
3	C	Two streams means two kits: sharps go in the Sharps kit, non-controlled drugs go in the Pharmaceutical kit.
4	B	Pathological waste, formaldehyde, laboratory chemicals and radioactive waste are out of scope.
5	B	Every returned mail-back kit gets a Certificate of Destruction.
6	C	End customers receive their records by email and mail. Don't promise a customer portal.
7	D	EPA bans sewering hazardous waste pharmaceuticals, and controlled substances must be destroyed to a non-retrievable standard with records.
8	D	When in doubt, call before anything ships.
9	A	We don't publish our DEA number. Customers request it through Easy Rx Cycle.
10	C	Needles, syringes, lancets, pen needles, auto-injectors and blades go in the Sharps kit.
11	A	Stop at the fill line. Overfilled containers are the most common inspection finding.
12	D	Chemo-contaminated sharps go in the yellow Trace Chemo container, which is incinerated.
13	B	Sharps and biohazard waste are autoclave-sterilized.
14	A	OSHA's Bloodborne Pathogens Standard governs sharps in the workplace; DOT and state rules cover shipping and treatment.
15	D	Sharps and biohazard customers get a Certificate of Destruction and a Medical Waste Manifest.
16	B	Milk jugs, coffee cans and loose bags are never acceptable containers.
17	A	Sizes run 1 quart to 28 gallon. Pick one they'll fill in weeks to months; the 1 quart suits home users.
18	A	Items saturated or caked with blood or OPIM are regulated medical waste.
19	B	It wouldn't drip or flake blood, so it's usually regular trash. When unsure, ask.
20	C	Sharps need a puncture-resistant container. Keep them out of the red bag.
21	B	The red bag lines the rigid box. The box is the shipping container.
22	C	Pathological waste is out of scope.
23	A	States are the main authority for RMW, alongside OSHA and DOT.
24	A	Biohazard waste is autoclave-sterilized.
25	D	Blood-soaked gauze, contaminated PPE, cultures and swabs are biohazard.
26	C	Non-controlled, non-hazardous medications, including OTC, samples and vitamins.
27	D	Hydrocodone is Schedule II. Controlled substances use the Controlled Substance kit.
28	D	P-listed and U-listed drugs are RCRA hazardous and go in the black RCRA kit.
29	A	When unsure, treat it as hazardous. Our team can also help classify it.
30	C	Pharmaceutical waste is destroyed by regulated incineration.
31	A	Non-controlled CODs list containers by weight, with a total.
32	A	Blue = pharmaceutical, red = medical waste, yellow = trace chemo, black = RCRA.
33	A	IV bags with no hazardous drug are non-hazardous pharmaceutical waste.

#	Answer	Why
34	D	It's a tamper-evident mailer for patient and consumer medications.
35	C	The mail-back kit is for patients' medications. A registrant's own controls need the DEA transfer paperwork of the Controlled kit.
36	D	Patient take-back allows controlled and non-controlled medications together.
37	D	Sealed take-back liners are not opened or inventoried.
38	C	On-site deactivation renders medications non-retrievable at the customer's location. Nothing ships back.
39	D	No return means no Easy Rx Cycle documents. Customers who need a Certificate should use a mail-back kit.
40	D	The Activated Charcoal Take-Back kit returns them for documented destruction.
41	D	Under DEA take-back rules, mail-back packages don't require collector registration; a kiosk does.
42	B	Inhalers, aerosols, sharps, chemo and illicit drugs are not accepted.
43	A	Controlled kits are for DEA registrants. We validate the DEA number when the kit comes back.
44	B	One list: company, DEA number, state, and each drug's name, strength, NDC and package size. We do the DEA forms.
45	D	Schedule I and II transfers require DEA Form 222.
46	C	Schedules III–V use our 3–5 Form.
47	D	Form 41 is the Registrant Record of Controlled Substances Destroyed.
48	C	We complete them. The customer fills out one list.
49	B	DEA requires destruction to a non-retrievable state.
50	D	Pick the weight tier that covers what's going out. Over 100 lbs is a custom quote.
51	C	DEA records must be kept at least 2 years.
52	B	Two witnesses, who sign by hand.
53	A	Creditable stock may earn credit through reverse distribution. We destroy what doesn't qualify.
54	C	RCRA-empty containers hold only a trace. That's what the Trace Chemo kit takes.
55	C	Visible drug remaining means it isn't RCRA-empty. That's bulk.
56	C	Yellow = trace chemo.
57	B	USP <800> covers hazardous drug handling, with OSHA, EPA and DOT.
58	D	Trace chemo must be incinerated.
59	A	Trace-contaminated PPE goes in the yellow Trace Chemo container.
60	B	Red = medical waste, blue = pharmaceutical, yellow = trace chemo, black = RCRA.
61	B	RCRA is an EPA program. No DEA registration is needed.
62	C	Nicotine is P-listed, so it goes in the RCRA kit.
63	C	EPA's hazardous waste lists are in 40 CFR 261.
64	B	Subpart P is an absolute ban on sewering hazardous waste pharmaceuticals.
65	D	Black = RCRA hazardous.
66	B	RCRA waste is tracked on the EPA manifest and gets a Certificate of Destruction.
67	A	RCRA waste goes to a permitted treatment, storage and disposal facility (TSDF).
68	C	D001 = ignitable, D002 = corrosive.
69	C	The EPA ID goes on the hazardous waste manifest.
70	A	It returns full charcoal disposal containers for destruction with a Certificate.

#	Answer	Why
71	B	Any activated-charcoal disposal product is accepted.
72	D	Weigh the filled containers and pick the tier.
73	B	The disposal manifest goes in the box. They receive a Certificate of Destruction and a copy of their manifest.
74	A	Over 50 lbs: multiple kits or a freight quote.
75	D	The kit is for used charcoal containers only.
76	C	Every returned mail-back kit gets a Certificate of Destruction.
77	B	Non-controlled CODs list containers by weight and the stream's destruction method.
78	D	Controlled CODs itemize every drug and are signed by hand.
79	D	Non-controlled CODs carry two electronic signatures. Controlled CODs are signed by hand.
80	B	The customer supplies the drugs to us. Arkansas Redistributors, LLC is Easy Rx Cycle's legal name.
81	C	Up to 20 lines per form; more items means additional forms.
82	B	Form 41 is the destruction record.
83	C	The Uniform Hazardous Waste Manifest follows RCRA waste from generator to TSDF.
84	D	The Medical Waste Manifest tracks regulated medical waste: sharps and biohazard.
85	C	On-site deactivation happens at the customer's location, so we issue nothing.
86	A	Keep hazardous waste manifests at least 3 years, longer if the state requires.
87	C	Schedule II on the 222, Schedule IV on the 3–5 Form, the destruction on Form 41, plus the Certificate.
88	B	Distributors order in the partner portal.
89	D	Kits ship in bulk to your warehouse. You resell from your stock.
90	B	You sell an empty kit. The waste goes straight from your customer to us.
91	D	Every kit includes its prepaid return label.
92	C	Those need a custom quote.
93	B	Mail-back covers controlled substances, small volumes and extra locations.
94	A	Flushing is never compliant.
95	D	The playbook shows MSRP only.
96	B	Non-registrants collecting patients' medications use the Medication Disposal kits.
